-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art of Figures 1 and 2 in view of Whiteley '645.

The admitted prior art of Figures 1 and 2 disclose a self-lubricating bearing as claimed with the exception of the plurality of depressions. The depressions of the prior art extend through the annular wall surface. Whiteley discloses in Figures 1-4 a self-lubricating bearing in which the depressions are formed through the annular wall surface. Whiteley also discloses in Figures 5 and 6 and alternate embodiment in which the depressions are distributed on the inner annular wall surface without penetrating through the outer annular wall surface. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the admitted prior art of Figures 1 and 2 such that the lubricant holding portions do not penetrate to the outer wall, because such a modification is taught and suggested by Whiteley '645.

Claim 2 is allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
